

Extra Credit Project – Lesson Plan

Develop a project or an exercise that would have helped you understand a topic better or would make the topic more interactive and interesting. The topic may be one that we have already discussed, will be discussing, or one that was not discussed but you feel should have been discussed. The project or exercise could be either incorporated into the laboratory or the lecture portion of the class.

With the project or exercise: write everything out clearly. What is the purpose of the exercise, what materials would be needed, goals of the project, questions that may be asked, or other outcomes that could be expected.

This will be due the last day of LAB – December 4 or 6. If you have any questions, please let me know.
